PROFESSIONAL PROFILE

UX/UI and Product Designer with 1+ years of experience bridging industrial design engineering and digital product thinking. Specialized in designing interfaces for technically complex products, from robotics control software to Mixed Reality applications, with a strong foundation in both hardware and software development processes. Works closely with engineering teams to translate complex workflows into clear, intuitive user experiences. Skilled across the full design process: user research, journey mapping, wireframing, high-fidelity prototyping, design systems, and accessibility (WCAG 2.1). Committed to inclusive design, with hands-on experience testing with real users and iterating based on feedback.

WORK EXPERIENCE

UX/UI Designer Intern – Neura Robotics

Metzingen, Germany | March 2026 – Present

- Redesigned the full application used by engineers and operators to monitor and command robot systems, including robotic arms and humanoid robots, rethinking the entire interface architecture to make technically complex information easy to read and act on.
- Built and maintained a Figma component library covering control panels, status indicators, and data display tiles, enabling faster and more consistent design across the product team.
- Collaborated daily with engineers and hardware teams to understand system behavior and ensure designs were both technically feasible and usable in real operating conditions.

UX/UI Designer Intern – Brissanova

Remote | September – December 2025

- Led UX design for a Mixed Reality application from concept to interactive prototype, defining user flows, interaction models, and spatial interface patterns optimized for immersive 3D environments.
- Discovered through early testing that standard screen-based UI patterns felt disorienting in 3D space. Researched spatial interaction approaches and redesigned the interface around depth and context, improving task completion rates across user sessions.
- Planned and ran usability tests with 8+ participants over two rounds, synthesizing findings into clear design recommendations shared with the development team.
- Applied WCAG 2.1 accessibility standards throughout, ensuring contrast ratios, readable typography, and interaction alternatives for users with motor impairments.

Freelance Designer – Brand & Digital Identity

Remote | January – December 2022

- Designed complete visual identities for 3 clothing and lifestyle brands, logo, typography, color palette, and social media templates, delivering brand guidelines clients could apply independently across all channels.
- Introduced structured Figma design systems to every project after noticing clients struggled with visual consistency, cutting revision rounds by approximately 40%.
- Managed the full client process from discovery and brief to final delivery, translating vague creative preferences into precise, actionable design decisions.

Design & Communication Assistant – Equal Opportunities Program – ITCR

Costa Rica | February 2022 – July 2023

- Produced accessible visual materials, infographics, digital posters, event guides, for disability awareness campaigns, applying plain language and high-contrast design principles.
- Identified that existing materials were inaccessible to visually impaired users and independently proposed a redesigned format in Figma and Illustrator, later adopted as the institutional standard for future campaigns.
- Coordinated design and logistics for 4+ inclusive events in collaboration with faculty, students with disabilities, and external organizations.

EDUCATION

Exchange Semester – Hochschule Magdeburg-Stendal

Germany | September 2025 – March 2026

Graduation project: assistive and communication technologies for users with motor and speech disabilities.

Bachelor's Degree in Industrial Design Engineering – Instituto Tecnológico de Costa Rica

Costa Rica | February 2022 – December 2025

Comprehensive training in product design, engineering principles, physical prototyping, and digital design — spanning hardware development, materials, manufacturing processes, and user-centered design methodology.

High School Diploma – Colegio Científico de Costa Rica

San Carlos, Costa Rica | October 2021

TECHNICAL SKILLS

Design Systems & Accessibility: Figma (advanced), component libraries, design tokens, WCAG 2.1 accessibility standards, inclusive design

UX/UI & Prototyping: Wireframing, high-fidelity prototyping, user research, journey mapping, interaction design, usability testing, spatial UI for MR/XR

Industrial & Product Design: SolidWorks, Fusion 360, Rhinoceros 3D, KeyShot, plus hands-on experience with CNC milling, laser cutting, woodworking and metalworking machinery

Digital Design: Adobe Illustrator, Photoshop, video editing, brand identity, visual communication

Productivity & Collaboration: Microsoft 365, Notion, Miro, Jira (basic)

Languages: Spanish (Native) | English (Advanced – C1) | German (Intermediate – B1)
